Power Flue 2017

POWER FLUE

OPEN FRONTED FIRE IN ANY SITUATION

Real Flame pioneered the first AGA approved power flue system in 2004. Prior to its development, open fronted gas fires were restricted to using a vertical flue which prevented installations in many situations such as the ground floor in two-storey homes, apartments or commercial applications.

The Power Flue enables the installation of open fronted gas fireplaces in virtually any situation with a horizontal or vertical flue run of up to 13.5m and incorporating up to four 90-degree bends. Longer runs with more bends are possible, however, Real Flame must approve these in writing. The Real Flame Power Flue system has been incorporated with great success in a wide range of prestige projects around Australia.
